

**NS270TURBODUST** is an innovative vacuum tool, with rotating brush and internal dust bag, which allows vacuuming carpets with any extraction machine. Its rotating brush allows to completely remove dust from carpet fibres. Particularly suitable for the model Sabrina, it can be used with any machine to vacuum carpet before cleaning.

This tool has no brush motor, since the brush rotation is activated by the extraction machine's airflow. Also, no vacuum motor is contained inside the tool, since the air is vacuumed by the machine body. Therefore, it is extremely light to use.

Since dust is collected by the bag inside the tool, there is no need to make any change to the extraction machine before switching from injection-extraction cleaning to dust vacuuming and vice versa.

### Advantages

1. It is possible to vacuum dust before cleaning, with any carpet extractor. No need to use a separate upright vacuum cleaner.
2. It is very light to manoeuvre.
3. Since the dust bag is inside the tool, it is not necessary to act on the machine, draining the recovery tank and putting a paper bag inside the machine before vacuuming.
4. After vacuuming, it is not necessary to remove the paper bag from the machine before cleaning with the injection extraction system.

### Technical Data

Dust bag capacity	2 Litres
Width of the vacuum head	270 mm
Weight	1,5 Kg

Complete tool with rotating brush and internal bag for vacuuming carpet before cleaning, Ø 32/38. 1 dust bag included	€
